

JCPenney Select Recliner Program – Special Order Mechanism Options

All Klaussner Recliners are made with a Leggett & Platt 350 EZ Mechanism

The new 350ez® series mechanisms give you the latest features your customers are looking for. From the extended layout to the improved linkage in high-stress areas, the built in quality features are unmatched by any other manufacturer in the industry. Once the handle unlocks the mechanism, the occupant's body weight opens the chair, creating effortless motion for EZ operation by all ages. The mechanism also slides forward as it reclines aiding wall proximity to accommodate any room configuration.

Reclining Chair

The "traditional" recliner. This chair **ONLY** reclines and does so with a handle located on the side of the chair. Once the handle unlocks the mechanism, the occupant's weight opens the chair for a simple, relaxing open and close movement.

Rocker Recliner

Rocker Recliners also offer the customer the same benefits as a reclining chair; a handle on the side of the chair unlocks the mechanism and the occupant's weight moves the chair into the "reclining" position. In addition to this motion, Rocker Recliners feature a special chair base that allows for a seamless **forward and backward rocking** movement when in the upright position.

Swivel Rocker Recliner

Swivel Rocker Recliners also offer the customer the same benefits as a reclining chair; a handle on the side of the chair unlocks the mechanism and the occupant's weight moves the chair into the "reclining" position. In addition to this motion, the Swivel Rocking base allows the operator to **turn easily from side to side** and **rock backwards and forwards** when in the upright position.

Glider Recliner

Glider Recliners also offer the customer the same benefits as a reclining chair; a handle on the side of the chair unlocks the mechanism and the occupant's weight moves the chair into the "reclining" position. In addition to this motion, the Gliding base allows the operator to move **forwards and backwards in an easy gliding motion**.

Swivel Glider Recliner

Swivel Glider Recliners are able to combine the best features of Recliner, Glider, and Swivel chairs. A handle on the side of the chair unlocks the mechanism and the occupant's weight moves the chair into the "reclining" position. Additionally, the Swivel Glider base allows the operator to **turn easily from side to side** and move **forwards and backwards in an easy gliding motion**.

Power Recliner

Similar to a "traditional" recliner, Power recliners **ONLY** offer customers the reclining motion. However, it is able to accomplish this at the touch of a button instead of by the occupant's weight. **A quiet motor** can take a seated occupant from fully upright to fully extended in 7 seconds by the push of a button. Customers have the capability to stop the motor at any point in the reclining motion for precise relaxation. Additionally, JCPenney offers their Power Recliners with 5 year warranties and a battery backup in case of a power outage (good for 2-3 cycles).

3 Way Power Lift Recliner

"3-Way" refers to the three positions this chair can assume; with the touch of a hand-held remote, a quiet motor takes a seated user from **fully reclined** (position #1) to **fully upright** (position #2) to **lifted** (position #3). Customers have the capability to stop the motor at any point in the reclining motion for precise relaxation. While the ease and comfort of a lift chair can be enjoyed people of by all ages and abilities, this mechanism is most popular with the elderly and physically impaired as the lift function allows the user to assume a standing position more safely than a traditional recliner. Additionally, JCPenney offers their Power Recliners with 5 year warranties and a battery backup in case of a power outage (good for 2-3 cycles).
